MSc Artificial Intelligence Student | Full-Stack Software Developer

SUMMARY

MSc Artificial Intelligence student at Kingston University London and First-Class Computer Science graduate with over two years of production experience building and deploying data-driven web applications. Independently delivered the end-to-end migration of a 20+ module legacy platform to Django, cutting average page load times from around 2 minutes to under 20 seconds. Applied experience across machine learning, computer vision (YOLOv5, CNNs), NLP and RESTful API development, with a track record of shipping clean, well-documented systems autonomously.

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL, PHP, Java, Rust
Machine Learning	PyTorch, Hugging Face, NLP, Transfer Learning, CNNs
Computer Vision	OpenCV, YOLOv5, Image Classification, OCR
Web Development	React, Node.js, Express, Django, Flask, Laravel, CSS
Databases	MySQL, PostgreSQL, Oracle SQL, MongoDB
APIs & Data	RESTful APIs, JSON, XML, Web Scraping, Data Visualisation
DevOps & Tools	Linux, Docker, Git, GitHub, GitLab CI/CD, Postman, Swagger

EXPERIENCE

Prime Vendor Nepal

Software Developer

July 2023 – December 2025

Kathmandu, Nepal

- Independently led the end-to-end migration of a 20+ module PHP (CodeIgniter) platform to Django over a six-month solo delivery cycle, reducing average page load times from around 2 minutes to under 20 seconds.
- Engineered a production reCAPTCHA-solving pipeline built on YOLOv5 object detection, capturing screenshots, running inference and programmatically selecting matched tiles; packaged in a custom Docker container with an audio-based fallback.
- Designed and built an in-house task and workflow management system in Django, supporting automated task assignment, email notifications and scheduled script execution, with clear technical documentation maintained throughout.
- Developed and maintained 20+ RESTful API endpoints covering full CRUD operations, documented with Swagger and Postman, enabling structured and secure data exchange across internal systems.
- Solely responsible for application deployment and Linux server administration, including environment configuration, process monitoring and performance optimisation.
- Designed and optimised relational database schemas in MySQL, underpinning structured data storage across multiple internal systems.

EDUCATION

Kingston University London

MSc Artificial Intelligence

January 2026 – Present

Leeds Beckett University, UK

BSc (Hons) Computer Science – First-Class Honours

Taught at The British College, Kathmandu

September 2019 – September 2023

PROJECTS

Dotted Matrix OCR*Python, OpenCV, CNN*

Built an optical character recognition pipeline to extract text from dot-matrix hardware displays, using OpenCV for image preprocessing and a CNN for character classification, taking raw images through to structured text output.

Plant Health Classifier*Python, PyTorch, Transfer Learning*

Trained a supervised image classification model to identify plant health conditions, applying transfer learning to improve accuracy on a limited dataset.

Movie Review Sentiment Analyser*Python, NLP, PyTorch*

Developed a binary sentiment classification model for movie reviews in PyTorch, covering tokenisation, feature engineering and neural network training.

MERN ChatGPT Interface*MERN Stack, OpenAI API*

Built a full-stack chat application integrating the OpenAI API, with a responsive React front end backed by a Node.js, Express and MongoDB stack.
